

# Mini Fiber Optic Cleaning Pens

**800+ cleaning cycles**

The OPTIX Mini Cleaning Pens feature a simple push-action mechanism paired with a superfine fiber cleaning strand that effectively removes dust, oil, and debris. Each unit is engineered to deliver over 800 cleaning cycles, making it well suited for frequent field use. Designed for cleaning single-fiber connectors within adapters, faceplates, and bulkheads using a dry method, the included dust cap also functions as an adapter for unmated connectors. A transparent window allows technicians to easily monitor the remaining cleaning belt, while the antistatic resin construction helps minimize contamination. Available in both 2.5mm and 1.25mm sizes, the Mini Cleaning Pens measure just 4.5 inches in length, offering a compact, user-friendly, and reliable solution for fiber maintenance.

## Features

- Push-action design quickly and effectively removes dust, oil, and debris from fiber optic end faces
- Compact 4.5" length with a lightweight mini form factor for easy field use
- Superfine fiber cleaning strand delivers consistent, high-performance polishing
- Supports 800+ cleaning cycles for extended service life
- Ideal for cleaning single-fiber connectors within adapters, faceplates, and bulkheads using a dry method
- Dust cap doubles as an adapter for cleaning unmated connectors
- One-push operation ensures fast, repeatable cleaning results
- Transparent inspection window allows easy monitoring of the remaining cleaning belt
- Constructed with antistatic resin to help minimize contamination
- Available in both 2.5mm and 1.25mm connector sizes

## Order Information

Part Number	Description
<b>CP-125M</b>	1.25mm mini cleaning pen for LC and MU connectors
<b>CP-250M</b>	2.50mm mini cleaning pen for SC, ST, and FC connectors
